

INSTRUCTIONS:
Fill out the hazard analysis and risk assessment below.
HA-001 should be for the lane departure warning function as discussed in t
HA-002 should be for the lane keeping assistance function as discussed in
Then come up with your own situations and hazards for the lane assistance
When finished, export your spreadsheet as a pdf file so that a reviewer can

Situational Analysis		
Situation Details	Other Details (optional)	Item Usage (function)
SD02 - High Speed		IU01 - Correctly used
SD02 - High Speed		IU02 - Incorrectly used
SD01 - Low Speed		IU01 - Correctly used
SD01 - Low speed		IU01 - Correctly used

Situation Description	Function
Normal driving on highway during rain with high speed.	Lane Departure Warning (LDW) function shall apply an oscillating steering torque to provide the driver with haptic feedback
Normal driving on country roads during normal conditions with high speed (the driver is misusing the lane keeping assistance function as a fully autonomous function)	Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane
Normal driving on country roads during fog conditions with low speed	Lane Departure Warning (LDW) function shall apply an oscillating steering torque to provide the driver with haptic feedback
Backwards Driving on a City Road in Normal conditions at Low speed at Day time	Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane

Hazard Identification		
Deviation	Deviation Details	Hazardous Event (resulting effect)
DV04 - Actor effect is too much	The LDW function applies an oscillating torque with very high torque (above limit).	EV-05 - Front collision with ahead traffic
DV03 - Function always activated	The lane keeping assistance function is not limited in time duration which leads to misuse as an autonomous driving function.	EV-05 - Front collision with ahead traffic
DV02 - Function unexpectedly activated	The LDW function is not able to detect the lane correctly.	EV-05 - Front collision with ahead traffic
DV03 - Function always activated	The steering torque keeps on and disturbs the driver	EV-03 - Rear collision with trailing traffic

Event Details	Hazardous Event Description	Exposure (of situation)
Vehicle collides with another vehicle ahead and cause injury to driver	Loss of steering	E3 - Medium probability
Vehicle collides with another vehicle ahead and cause injury to driver	Driving on a country road with high speed and misusing the system	E2 - Low probability
Vehicle collides with another vehicle ahead and cause injury to driver.	Driving on a country road with low speed and partial loss of steering.	E2 - Low probability
Vehicle crashes into the obstacle or road infrastructure	Total loss of vehicle's control	E1 - Very low probability

Hazardous Event Classification

Rationale (for exposure)	Severity (of potential harm)	Rationale (for severity)
Driving on highway when it is raining occurs once a month or more often for an average driver	S3 - Life-threatening or fatal injuries	On highway speed of vehicle is expected to be high
Driving on a country road with high speed, and misusing the system. That combination probably does not happen often, so we will label the exposure E2.	S3 - Life-threatening or fatal injuries	The driver is traveling at high speed,
Driving on a country road with low speed under fog condition is not a high probability event for most driver.	S2 - Severe and life-threatening injuries	The driver is traveling at low speed,
Backwards driving in the city is very rare	S1 - Light and moderate injuries	In city traffic, speed of vehicle is expected to be low

on		Determin
Controllability (of hazardous event)	Rationale (for controllability)	ASIL Determination
C3 - Difficult to control or uncontrollable	The malfunction was that the lane keeping warning applied too much torque in a too high frequency, the drivers lose control of steering. Because steering is lost on the wheel at high speeds, a vehicle accident would not be controllable. We will label this hazardous situation as C3	C
C3 - Difficult to control or uncontrollable	The malfunction was that the lane keeping assistance was always on and had no time limit, so drivers could take both hands off the wheel. Because hands aren't on the wheel at high speeds, a vehicle accident would not be controllable. We will label this hazardous situation as C3.	B
C3 - Difficult to control or uncontrollable	The malfunction was that the LKW unexpectedly activated and vibrated the steering wheel. The drivers may lose control of steering. We will label this hazardous situation as C3.	A
C1 - Simply controllable	When driving backwards the driver is usually paying more attention, and it is easily controlled by applying brakes	QM

Definition of ASIL and Safety Goals

Safety Goal

The oscillating steering torque from the lane departure warning function shall be limited

The lane keeping assistance function shall be time limited, and the additional steering torque shall end after a given time interval so that the driver cannot misuse the system for autonomous driving.
--

The LDW function shall deactivate when the camera sensor is unable to detect road markings, and shall warn the driver of its deactivation.
--

Steering torque should be disabled

Exposure

ID	Description
E0	Incredible
E1	Very low probability
E2	Low probability
E3	Medium probability
E4	High probability

Severity

ID	Description
S0	No injuries
S1	Light and moderate injuries
S2	Severe and life-threatening injuries
S3	Life-threatening or fatal injuries

Controllability

ID	Description
C0	Controllable in general
C1	Simply controllable
C2	Normally controllable
C3	Difficult to control or uncontrollable

Duration (of situation)
Not specified
<1 % of average operating time
1 % to 10 % of average operating time
>10 % of average operating time

Remarks
No injuries
Light and moderate injuries
Severe and life-threatening injuries (survival probable)
Life-threatening injuries (survival uncertain), fatal injuries

Remarks
Controllable in general
99 % or more of all drivers or other traffic participants are usually able
90 % or more of all drivers or other traffic participants are usually able
Less than 90 % of all drivers or other traffic participants are usually ab

Frequency (of situation)
Occurs less often than once a year for the great majority of drivers
Occurs a few times a year for the great majority of drivers
Occurs once a month or more often for an average driver
Occurs during almost every drive on average

Probability of Injuries
AIS 0 and less than 10 % probability of AIS 1-6
More than 10 % probability of AIS 1-6 (and not S2 or S3)
More than 10 % probability of AIS 3-6 (and not S3)
More than 10 % probability of AIS 5-6

usually able to avoid harm
usually able to avoid harm
usually able, or barely able, to avoid harm
